

# Commander

## Intelligently networked.

Vectron Commander connects the head office with all branch cash registers – if desired, worldwide. Simplified data administration, automated data transmission and data evaluation provide comprehensive information with a minimum of effort.

The screenshot shows two windows from the Vectron Commander software. The top window, titled 'Show report - PLU report', displays a report for '700 PLUs (all)'. It includes the Vectron logo, the title 'PLU report', and the following data:

No.	Name	Quantity	Amount	%Amt
2	Mushroom Soup	1.000	2.00	1.874
5	Vegetable Soup	1.000	1.95	1.828
10	Melon	1.000	2.75	2.577
14	Smoked Chicken	1.000	2.95	2.765
16	Avocado Prawns	1.000	2.95	2.765
24	Baked Cod	2.000	13.90	13.027
25	Roast Beef	3.000	23.85	22.352
26	Roast Lamb	1.000	7.95	7.451

The bottom window, titled 'MobilePro - Clerks', shows a list of clerks with columns for 'Nr', 'Number', 'Name', 'Search no.', 'Touchcode', 'Personnel nr.', 'Secret code', 'By key only', and 'Lock'. The data is as follows:

Nr	Number	Name	Search no.	Touchcode	Personnel nr.	Secret code	By key only	Lock
1	1	Nonon	1	1	1			
2	2	Isay	2	2	2			
3	3	Dirv	3	3	3			
4	4	Jan	4	4	4			
5	5	Reckl	5	5	5			

Below the list is a configuration form for a clerk with fields for Number, Name, Search no., Touchcode, Personnel nr., Secret code, By key only, Lock, Authorisation, and Must log in. There are also several checkboxes and dropdown menus for additional settings like 'No limit to memo', 'Balance limit Mode', 'Foreign table', etc.

VECTRON SYSTEMS

Number

Name

Search no.

Touchcode

Personnel no.

Secret code

By key only

Lock

Authorisation

Must log in

Automated, time-controlled transmission and reading of cash register data

Centralised base data administration

Safe cash register backup and optional remote maintenance

Rapid keyboard programming and creation of PLU info texts

Report generator and automatic report printing

Processing of decentralised order- and working hour data

Data acceptance from and data forwarding to Back Office software

Security through individual access rights

Communication via PC networks or telephone connections

Scalable by distributing communication in the PC networks

Compatible with all Vectron POS systems

## Automatic polling and transmission

Data polling and PLU- and price changes are generally carried out after branch closing. Accordingly, the Vectron Commander communications module establishes the connections right on time and reacts automatically to the non-availability of a cash register or connection abort.

## Central administration and control

The turnover data from all cash registers is individually recorded, thus providing the basis for extensive analysis and reporting. Furthermore, Vectron Commander supports the expanded features in the Vectron point-of-sale systems.

## Time and attendance

Vectron Commander accepts the working hours booked at the cash registers. Along with an initial basic evaluation, it allows connection to work-time programs. That means even people who sign on and out in different outlets are registered.

## Order administration

To facilitate efficient branch ordering, Vectron Commander transmits optimised suggested order lists, which are accepted by the branch cash registers or, to save time, adapted only in detail. Likewise, it can import additional individual orders to the cash register.

## Keyboard programming and operator rights

In Vectron Commander, new keyboard assignments are prepared clearly grouped. If desired, they can be transmitted to numerous cash registers. Operator rights, for example the option of granting discounts, are changed in the onsite cash register by the head office.

## Flexible connections

With Vectron Commander, Vectron cash register systems can be reached practically worldwide. Along with analogue and ISDN connections, Vectron Commander also supports mobile communications. Onsite cash registers are connected through a serial cable. Alternatively, they use existing Ethernet structures together with a PC network.

## Security and access control

The access rights for various program sections in Vectron Commander are individually allocated. Those who e.g. are permitted to change PLU prices do not necessarily have access to turnover evaluations. Those who e.g. have no direct program access can, for instance, automatically obtain a filtered department report on their printer, etc.

## Scalable

The optional multi-station capability enables network application of Vectron Commander. Multiline licenses allow the connection of several modems for parallel communication with numerous POS systems. Consequently, the ECR data can be retrieved within a reasonable period even with a large number of outlets.

## Report generator

The report generator enables individual report adaptation. At the same time, external data can also be linked with cash-register report data to completely new reporting models. Turnover and discount analyses are further examples of the many opportunities built into Vectron Commander.

## Back Office connection

Via an open interface, Vectron Commander interacts with Back Office programs. Along with turnover and PLU base data, keyboard layouts, operator rights, PLU info texts, macros etc. can also be imported and exported. Links to a great variety of popular Back Office software already exist. Please ask your dealer about interfaces to your specific software solutions.
